Bachelor of Arts in Greek & Roman Archaeology | Very Good (High Distinction) | 2021 – 2025

Training & Certifications

- **Frontend Track | Mahara Tech | 2025**
- **Frontend Diploma | Route Academy | 2026**
- **React Native - The Practical Guide | Udemy (Maximilian Schwarzmüller) | 2026**
- **The Ultimate React Course 2025 | Udemy (Jonas Schmedtmann) | 2026**

Projects

Echo - Social Media Application

Echo is a web application built using React and Vite that demonstrates modern frontend development skills in building interactive and responsive user-facing features

Includes:

- User authentication, dynamic feed functionality
- Built with React, Tailwind CSS, and Heroicons, showcasing a clean and scalable frontend architecture
- React Context for state management
- React Hot Toast for real-time notifications, and React Icons for interactive UI elements.
- A well-organized folder structure that separates components, pages, contexts, and utilities, reflecting best practices in maintainable and modular code design.

• **Repo:** <https://github.com/samaelbakry/Echo.v.2>

• **Demo:** <https://echo-v-2.vercel.app/login>

GoCart E-commerce Application

GoCart a web application is a modern web storefront built using Next.js 16 and TypeScript, showcasing a scalable and well-structured frontend architecture

Includes:

- The project follows a clean App Router folder structure with clearly organized directories for pages
- integrates shadcn UI components together with Tailwind CSS to build responsive, reusable UI elements
- demonstrating proficiency in combining utility-first styling with type-safe React development and modern Next.js features.
- implements authentication and session management using NextAuth, and applies Next.js Middleware (proxy) to protect routes, handle authorization logic

• **Repo:** <https://github.com/samaelbakry/Gocart.Next.js>

• **Demo:** <https://e-commerce-gocart.vercel.app/>

Skills

Frontend Frameworks & Languages: Proficient in JavaScript, TypeScript, React, and Next.js with expertise in Hooks, SEO optimization, and building fully responsive user interfaces.

State & Data Management: Skilled in managing application state and data flow using React Query, Redux, Context API, and custom Hooks for efficient and scalable solutions.

Backend & Database: Skilled with Supabase, including Authentication, PostgreSQL and Row Level Security

Styling & UI Tools: Adept at using Tailwind CSS, Bootstrap, Toast UI Libraries, and NPM for creating polished, maintainable, and visually appealing user interfaces.
